

Read the news article and answer the questions in parts 1 & 2 below.

Underline the answer you think is correct.

To celebrate the 30th anniversary of the Golf GTi, Volkswagen has allowed a group of its normally very sensible engineers to go crazy. The result is the Golf GTi W12 650 - and, yes, the 650 bit does refer to brake horsepower.

The engineers have taken parts from other VW products including the brakes of a Lamborghini Gallardo and Audi RS4, gearbox of a VW Phaeton, and, amazingly, the 12-cylinder twin-turbo engine of a Bentley Continental GT (which is now wedged in the Golf's rear-end) you'd expect the results to be pretty spectacular. And they are, sort of.

This simple hatchback goes from 0 to 100kph in 3.5 seconds and has a top speed of 202mph. But, as Jeremy discovered, it absolutely, positively will not go round corners without trying to kill you to death.

However, this car is intended as a sort of gift to the many die-hard Golf GTi fans who've stuck with the car over its illustrious 30-year history. And, as such, it beats the hell out of a supermarket clubcard.

1

What would be the best title for this article?

- A. VW's crazy engineers become sensible.
- B. Golf GTi W12 fails all tests.
- C. New V12 engine for Bentley Continental
- D. Die-hard fans receive birthday gift

2

Answer the questions - True or False

- A. The Golf does not contain parts from other cars  
True  False
- B. The Golf goes around corners very well  
True  False
- C. The fans prefer supermarket club cards  
True  False
